

Runtime Error opening PDF file in Adobe 9

Customers using Adobe Reader version 9 may get the following error:

```
Microsoft Visual C++ Debug Library  
Runtime Error!  
Program: C:\Program Files\Adobe\Acrobat 9.0  
\Acrobat\Acrobat.exe  
The application has requested the Runtime to terminate it in  
an unusual way. Please contact the application's support team  
for more information.
```

To resolve this issue, please either revert the Adobe Reader software back to the latest 8.* version.

Please read the following article which (under the heading "Product Area: Viewer") states that roaming Profiles on Windows and Networked Home Directory on Macintosh are not supported configurations for 9.0 or 9.1. Adobe is looking at the possibility of supporting this for the next major release.
